PROFESSIONAL SUMMARY

Full-Stack Software Engineer with over 2 years of experience building high-performance web applications. Expertise in React.js, Next.js, Node.js, and PostgreSQL. Proven ability to bridge the gap between complex business requirements and technical solutions by automating workflows and developing scalable SaaS-ready tools. Experienced in building robust authentication, real-time data visualizations, and optimized backend architectures.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, Python, SQL, Java.
- **Frontend:** React.js (19), Next.js, Redux Toolkit, Tailwind CSS, Material UI.
- **Backend & Databases:** Node.js, Express.js, Prisma ORM, PostgreSQL (JSONB), RESTful APIs.
- **Tools & DevOps:** Git, GitHub, CI/CD, Vite, render, neon, Docker, Postman, Linux, VS Code, Antigravity IDE.
- **Core Concepts:** System Architecture, Data Structures & Algorithms, SDLC, Role-Based Access Control (RBAC).

SOFTWARE ENGINEERING EXPERIENCE

Freelance | Web Developer Dec 2023 – present

- Architected a high-performance SPA for HR Management & CRM using React 19, Vite, and Tailwind CSS.
- Engineered complex client-side state management using TanStack Query, optimizing API integration and data caching.
- Developed interactive, real-time data visualization dashboards with Recharts to enhance HR metric reporting.
- Implemented secure Role-Based Access Control (RBAC) and dynamic client-side routing.

Cura Care | IT & Database Administrator Jun 2024 – Jan 2025

- Optimized data tracking and reporting infrastructure through advanced Google Sheets automation and custom scripting.
- Managed company IT infrastructure, ensuring 99% system uptime and secure data handling.

KEY PROJECTS

DataForge | Full-Stack Custom Data Modeling Platform | [Live Demo](#) Tech Stack: React, Node.js, Express, PostgreSQL, Neon

- Engineered a schema-less data modeling engine using PostgreSQL JSONB, allowing dynamic user-defined data structures without migration overhead.
- Developed an in-memory high-performance ingestion pipeline using SheetJS and Multer, enabling bulk insertion of thousands of records in milliseconds.
- Implemented secure, stateless authentication using HTTP-only cookies and SameSite protection to prevent XSS/CSRF.
- Designed a resource-constrained engine to dynamically enforce subscription-based limits (Free, Pro, Team).

Developer Portfolio & CMS | Full-Stack Content Management Platform | [Live Demo](#) *Tech Stack: React, Node.js, Express, PostgreSQL, Neon, Tailwind CSS v4*

- **High-Speed Compilation & Build Optimization:** Engineered a responsive developer portfolio SPA utilizing React 19 and native Tailwind CSS v4 Vite integration (@tailwindcss/vite), eliminating PostCSS overhead and reducing bundle build compilation times to under 500ms (a 5x performance gain).
- **JWT-Protected Admin Dashboard (CMS):** Built a secure, token-based Admin Control Panel with complete CRUD capabilities, allowing real-time edits, deletions, and insertions of projects, experience nodes, skills, and credentials live on the site.
- **Extensible RESTful API & Asset Handling:** Developed a Node.js Express API backed by PostgreSQL connection pooling (Neon), supporting Multer disk-storage for project image/video uploads and custom Nodemailer SMTP dispatch handlers for automated contact alerts.
- **Concurrent Session Limiting:** Engineered a database-backed session state management system restricting active logins to a maximum of one concurrent device, invalidating existing user session tokens automatically upon new logins to prevent password/account sharing.
- **Workspace Activity Audit Logging:** Designed a structured activity audit engine recording all state-modifying database transactions (insertions, deletions, configuration updates, and bulk imports) with timestamps and active user IDs, displaying interactive change history logs to improve data integrity and compliance visibility.

Lead Report Handler | Telesales Analytics Tool | [Demo](#) | [GitHub](#) *Tech Stack: React, Hooks, LocalStorage*

- Built a high-speed React application for real-time sales performance tracking and conversion analytics.
- Automated end-of-day metric reporting by implementing custom math engines for instant outreach calculations.

Express & EJS Blog Platform — Event-Driven Content Management System | [GitHub](#)

- **Asynchronous Event Queue:** Designed and implemented an event-driven task queue using Node.js EventEmitters to offload background tasks (such as sending user mail alerts, compiling analytics logs, and running automated cleanup routines) out of the main request-response cycle, significantly reducing API response latency.
- **Server-Side Rendering (SSR):** Built a dynamic frontend view rendering engine using EJS (Embedded JavaScript Templates) and Express, maximizing SEO indexing and minimizing initial page-load times compared to client-rendered applications.
- **RESTful CRUD Architecture:** Engineered RESTful endpoints for user registration, blog post curation, category tagging, and comment moderation, enforcing secure data validation rules at the server boundary.
- **Structured Storage & Routing:** Configured relational/JSON data schemas to persist blog entries, utilizing modular route middleware to manage authentication states and authorization rules.

EDUCATION B.Sc. in Computer Science – Tanta University, Egypt 2019 – 2024

CERTIFICATIONS

- React Web Developer (Root Academy)
- Python Programmer Bootcamp (365 Data Science)
- Introduction to AI & Applications (Zewail City)
